

Client Survey  
May 2022  
24 Responses

Of those surveyed, families accessed the following:

Physiotherapy 67%

Occupational Therapy 58%

- 100% of caregivers indicated that they have increased awareness and understanding of their child's developmental needs and issues. This met our program's goal of 90%.
- 87.5% of caregivers indicated that they have increased ability to successfully implement strategies that support their child's development. We'll need to work harder at this to meet our program goal of 90%.
- 87.5% of caregivers that have increased ability to successfully implement strategies that support their child's development. This meets our program goal of 80%.
- 100% that indicate feeling supported and prepared for the next step with their child. This meets our program goal of 90%.
